No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present nucleotide sequence, the coding region of which is also CC claimed, is that of cDNA encoding human 53010, a novel member of the CC carboxylesterase family. The invention provides 53010 nucleic acids, CC antisense molecules, expression vectors, host cells, transgenic animals, CC 53010 proteins, fusion proteins, antigenic peptides, anti-53010 CC antibodies and methods for detecting the presence of 53010 polypeptides CC or nucleic acids, of identifying a compound that binds to the 53010 CC polypeptide, and of modulating the activity of the polypeptide. The 53010 CC polypeptide, and of modulating the activity of the polypeptide. The 53010 CC polypeptide, and polypeptides can act as novel diagnostic and CC therapeutic agents for controlling disorders involving aberrant or CC deficient hydrolysis of carboxylic esters. As 53010 malecules can CC expression is regulated in some rodent pain models, 53010 molecules can also act as novel diagnostic targets and therapeutic agents for CC controlling neurological disorders, such as pain-related disorders. A CC claimed method of tracting or preventing a disorder (especially a pain-cc appressing cell involves administering a compound that modulates 53010 CC expressing cell involves administering a compound that modulates 53010 CC activity or expression. 53010 nucleic acids are also useful in chromosome marays, for detection of variations or mutations, as surrogate markers and control of the control of carrays, for detection of variations or mutations, as surrogate markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    53010 nucleic acids, useful for diagnosing and treating e.g. vascular diseases, autoimmune diseases, or neurodegenerative diseases, as surrogate markers, in tissue typing and chromosome mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 109-110; 122pp; English.

disorder or identifying and treating a subject having a urological disorder.

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Or treating a subject having a urological disorder: Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological disorder; and (3) a method for treating a subject having a urological disorder. The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence encodes a human urological disorder related protein, which is used in the exemplification of the present

The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. I activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropineuroprotective, immunosuppressive, haemostatic, antiinflammatory, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorecti

nootropic,

The

The invention relates to an isolated human drug metabolising enzyme (DME) and its nucleotide. DME is useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME, where the disorders immunodeficiency syndrome (AIDS), asthma, atherosclerosis, psoriasis, cirrhosis, hepaticis, and cancer; a neurological disorder such as Alzheimer's disease, Huntington's disease, dementia, Parkinson's disease, a developmental disorder such as reached as relationating to the such as adenoma, thrombosis and infections; an eye disorder such as conjunctivitis, glaucoma, cataract; metabolic disorder such as conjunctivitis, glaucoma, cataract; agastrointestinal
                                                                                                                                                                                                                                 Novel human drug metabolizing polypeptide, useful in diagnosis, prevention or treatment of autoimmune/inflammatory, cell proliferative, neurological, developmental, endocrine, metabolic and gastrointestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                            08-DEC-2000; 2000US-0254308P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             999999998888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorder such as anorexia, peptic ulcer; and liver disorders. DME is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. The invention is useful for creating knock-in humanised animals or transgenic animals to model human diseases in somatic or germline gene therapy, to generate a transcript image of a location due to translocation, inversion, etc. among normal, carrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. The present sequence is human DME-10 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2232

The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC disorder, neurological disorders, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence that for this patent is not represented CC in the printed specification, but was obtained in electronic format CC directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV, Mooney EM, Delegane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirton Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Gatury S, Shi X, Suarez CJ;

Claim 1; Page; 222pp; English.
```

The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide or peptide of the polynucleotide by contacting the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC between the two, a transformant carrying the polynucleotide in an CC expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe CC for detecting the polynucleotide. The polynucleotide or cc is useful as a primer for synthesising the polynucleotide, or as a probe CC for detecting the polynucleotide. The polynucleotide or as a probe CC for detecting are useful as pharmaceutical agents and many disease-related CC genes may be included in them, for developing a diagnostic marker or CC medicines for regulation of their expression and activity, or as targets CC regeneration. Membrane proteins, signal transduction-related proteins, cancer, tumours The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The Sequence presented is a cDNA of the invention. Note: Some of the sequence CC data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.

```

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy. in

Claim 1; SEQ ID NO 736; 205pp; English.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                             문
                                                                                                                                 US-10-023-515-2 (1-581) x ABX72267
                                                                                                                                                                                                                                                                 The invention relates to human polypeptides, termed NOVX, and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, scleroderma, septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABX72170-ABX72275 represent human NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-JUN-2001

Human drug metabolizing enzymes, useful disorders associated with aberrant (DME) autoimmune disorders. l in the diag
E) activity, diagnosis (and treatment cancer and 얁

Claim 12; SEQ ID NO 20; 142pp; English

This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a gene which encodes a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.
